A FINAL-YEAR IT STUDENT WITH A SOLID FOUNDATION IN FULL-STACK WEB DEVELOPMENT

A final-year Information Technology student with practical experience in Full-stack Web Development using ReactJS, Node.js, and ASP.NET MVC. Driven by a strong interest in financial markets, I possess an analytical mindset that helps me tackle complex system logic and optimize data structures effectively. Complemented by a high dedication to emotional intelligence (EQ) and active listening, I excel in collaborative team environments and look forward to contributing to high-quality software projects during my internship.

WORK EXPERIENCE

School Project

07/2024 - Now

SCHOOL

PROJECT:

E-Commerce Fashion Website (Full-stack)

- **Timeline:** 2024
- **Position:** Full-stack Developer
- **Description:** Developed a complete e-commerce platform including a modern user interface and a robust Admin Panel for store management.
- **Key responsibilities:**
 - Built a smooth, fully responsive user interface compatible with all mobile and desktop devices.
- Developed core e-commerce functionalities: shopping cart, product search by name/price, category filtering, and checkout flows.
- Implemented user authentication and role-based authorization (Admin/User) using **JWT**.
- Designed and built **RESTful APIs** to seamlessly handle CRUD operations for products, orders, and users.
- Tech stack utilized: **ReactJS, Node.js (ExpressJS), MongoDB, Tailwind CSS**.

AI-Powered Customer Support Chatbot

- **Timeline:** 2024
- **Position:** Backend Developer
- **Description:** Built an intelligent chatbot system integrated directly into websites to automate and optimize the customer care experience.
- **Key responsibilities:**
 - Connected and handled data streaming with large language models via **OpenAI GPT API (GPT-4/GPT-3.5)**.
- Processed real-time response logic, enabling the chatbot to understand and answer user queries flexibly and accurately based on context.
- Managed data flow and securely stored conversation histories in a **MongoDB** database.

- Tech stack utilized: **Node.js (ExpressJS), ReactJS, OpenAI API, MongoDB, Bootstrap.**

Clothes Management Website - ASP.NET MVC

- **Timeline:** 2023 (Academic Project)
 - **Position:** .NET Developer
 - **Description:** Designed and deployed a clothing store management web application based on the MVC architecture.
 - **Key responsibilities:**
 - Strictly applied the MVC pattern to separate presentation, logic, and data layers.
 - Designed relational database schemas using **SQL Server**, optimizing queries for products and order data.
 - Implemented core features: product detail views, inventory management, and shopping cart processing.
 - Tech stack utilized: **C#, ASP.NET MVC, SQL Server, HTML/CSS, JavaScript.**
-

HIGHLIGHT PROJECT

Personal OS

04/2026 - Now

Designed and developed a highly optimized, minimalist time-management web application tailored for goal tracking, enabling users to create customized milestones, track learning/working roadmaps, and receive automated task reminders.
